

# WHY IS MY UPSTAIRS **SO HOT?**

HERE ARE A FEW REASONS YOU CAN'T COOL DOWN!

## DUCTWORK ISSUES

If your ductwork is leaky, uninsulated, or unbalanced, the cool air won't reach the rooms that need it most.

## POOR INSULATION

Insulation keeps heat out. Without it, the outdoors comes in.

## AIR LEAKS

Little gaps cause big problems: letting heat in and cool air escape.

## IMPROPERLY SIZED AIR CONDITIONER

The wrong size AC can't cool your home properly, leaving you hot and frustrated.
